The standard aftermarket drops spindles that are used on '60 - '87 Chevy trucks are loosely based on '71-'87 stock spindles. These drop spindles allow you to keep your stock coil, stock shock, steering geometry and get a 2½-inch drop without any other modifications. The only issue with these drop spindles is that on '63-'70 trucks it widens the track width approximately ¾ inch per side.

In 1971, GM released trucks that came standard with disc brakes. In doing this they had to widen the track width  $\frac{3}{4}$  inch per side (actually, late '70 trucks came with a  $1\frac{1}{2}$ -inch wider rear end in anticipation of the disc brakes). This could become an issue if using custom wheels and/or tires

**\*\* PLEASE READ THE FOLLOWING \*\***

Most panels are 18-gauge, E-D-Primer coated and are carefully packaged to protect against damage that may occur during transit. However, after overseas transport & cross-country delivery to you, it is likely there could be a small ding or minor scratch. These minor blemishes cannot be helped and are considered normal due to the nature of the product. Any physical damage in transit must be reported to delivering carrier at time of delivery. Test fit all panels prior to paint and installation.
